## FT-route

Version 1.4

### Fugawi Tracker<sup>©</sup> Connector to the M2M-commserver

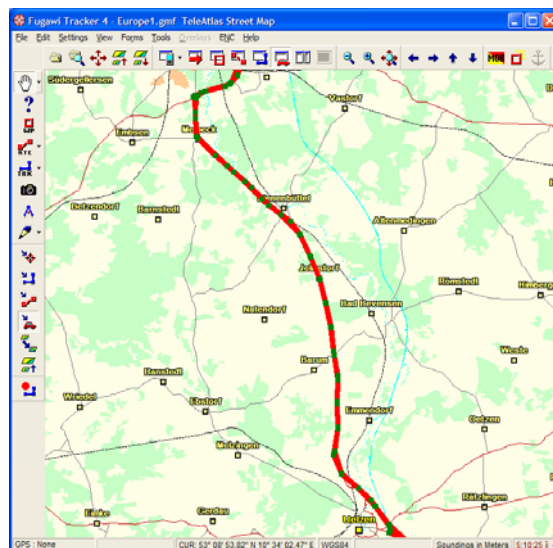

With FT-route you can display positions, that have been stored in the M2M-commserver, using Fugawi Tracker. You can display them as positions or routes in a map of your area.

This allows to see exactly when which vehicle has been where and which route it has taken.

**Fugawi Tracker allows you to create your own digital maps for your area from scanned paper maps or other digital sources.** This flexibility permits you to use a wide variety of maps depending on the location of the asset (ie. topographical, marine or street maps).

This is especially interesting for areas for which digital maps are not yet available.

Access to the M2M-commserver data is protected with a personal login and password.

**Route of a Vehicle  
in Fugawi Tracker**

## The Functionality

FT-route is a JAVA applications that runs on your PC and which is sitting in the background of Fugawi tracker®.

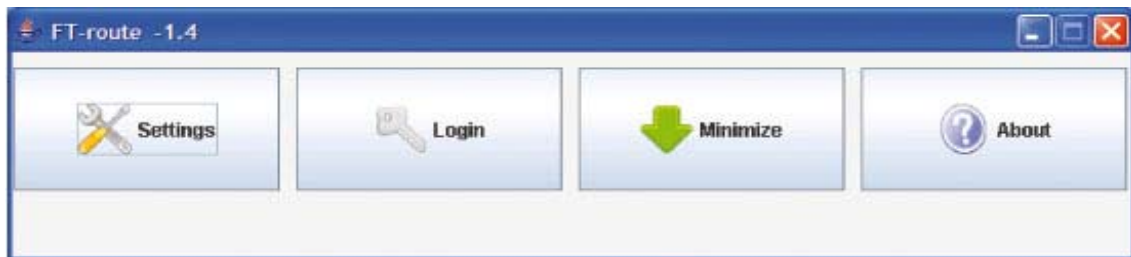

It handles the login into the M2M-commserver and transfers all data available on the M2M-commserver over the internet into the local database of Fugawi Tracker on your PC.

Once the data is there, you can use all functions of Fugawi Tracker to display the data.

FT-route allows polling on a pre-determined schedule (e.g. every 5 minutes) to transfer new data automatically from the M2M-commserver into the Fugawi Tracker data base. Fugawi Tracker then displays the new positions immediately. This ensures, that you are continuously up-to-date regarding the positions of your vehicles.

## The Elements of FT-route

## Products

Product	Part-No.	Product Description	Price
FT-route	FTR-05-23	Fugawi Tracker Interface Software to display data stored in the M2M-commserver with Fugawi Tracker	278 Euro 1895 Euro
	FTR-02-24	10 targets unlimited version
