

Time-29

Version 2.4

Recording of attendance times of mobile employees and subcontractors

Does your company employ people at constantly changing locations, a long way from your offices and production sites? They you are probably familiar with this issue: It is very difficult to check whether all employees really do comply with agreed working times and break times.

That is not a thing of the past: With our **time-29** every work starting time, every interruption and every work ending time can be registered at any location worldwide covered by cellular radio and forwarded practically in real time to a central office, site manager or client.

All you need for this is time-29 on-site, a SIM card with GPRS data tariff and an internet-ready PC to retrieve the data.

An internet software designed for use with time-29 shows you the registered data of the mobile employees and facilitates analyses and the forwarding of the data to your payroll department.
