V-locator^{business}

Fleet management and electronic drivers logbook for medium sized fleets

The v-locator business suits operators of fleets from about 25 to 200 vehicles which have their focus on the surveillance of the usage of their vehicles and on bringing them to account.

Craftsmen, social-services, hirers of construction machines, delivery services transport companies and many other businesses have the possibility with our v-locator business to see and control their vehicles and bring them to account.

Furthermore many analysis tools concerning routes and retention periods on each place, e.g. daily reports, monthly reports help you with bringing the vehicles to account and with the declarations for the tax computation.

★ current position of the vehicle

The v-locator business determines the current position of the vehicle via a highly precise GPS satellite receiver in real-time. The user does not need to install any software on his PC and can access his data from every PC which is connected to the internet.

In addition the user will be informed fully automatically about suspicious changes, e.g. a construction machine is removed from a place while the anti-theft-protection is activated.

Mazore Trading Ltd. - Krinon 16 - 3110 Ekali – Limassol/Cyprus

Examples of Reports

The list of routes shows the start- and end-point of every route:

**Reports of the driving behavior:
does the driver use the vehicle carefully?**

Besides the above shown reports the web based reporting software of the v-locator business provides a variety of additional reports which allow to examine all important data of your vehicles.

The software allows to configure automatic reports that are sent by Email to the user periodically without logging into the system and selecting relevant data every time a report is needed.

Feature list

- **Hardware:**
 - GSM/GPRS/GPRS remote surveillance module
 - GSM/GPRS combined window antenna for easy installation inside the vehicle
 - Connector with screw-clamps for connecting the unit to the vehicles power (including fuse)

- **Service:**
 - Usage of fleet-controlweb, the web based fleet-management-software
 - Electronic drivers logbook analysis functionality including the possibility to name geo positions, e.g. "office" instead of "Miller Road 4".
 - Clearing of tele-pos for checking the current position of the vehicle via phone. The announcement will be updated if the vehicle is moving
 - Immediate information about the current position of a vehicle either as full address or as a symbol on a map on the screen
 - Information about the vehicle battery voltage
 - Information about the status of the digital inputs of the unit
 - Clearing for professional security-centers

- **Advantages of our systems:**
 - Overview of the current position and status of all vehicles at once
 - The actual position of a vehicle can immediately be shown on a map (including zoom function down to street level)
 - Many analysis possibilities of the driven routes as well as of the status of each vehicle either with pre-configured forms or based on templates that have been designed by the user himself.
 - The documented retention periods make it easy e.g. to exactly calculate the work-time of service-technicians
 - The data will be saved six months in the data center and may be transferred at any time to your PC
 - Full GPRS support allows significant decrease of mobile phone costs which typically range between 5 and 10 Euros per vehicle per month including the monthly basic fee of the mobile phone network provider.
 - Enabling or disabling attached consumers via SMS, telephone-call or internet by invoking the appropriate command (e.g. enabling the independent vehicle heater out of your house)
 - Minimal cost of ownership due to the possibility of updates of the application inside the remote control unit over the air.

Mobile box to be connected to the cigarette lighter

The remote-surveillance-module

The v-locator remote-surveillance-module combines the GPS-satellite-receiver, the GSM-module for transferring positions and alarms from the vehicle to your mobile phone, to the fleet-management-software or to a security call centre as well as the inputs and outputs for surveillance and control purposes of the vehicle.
