V-locator*work*

Electronic log book,
navigation, communication center,
telephony, vehicle localization
and fleet management

Our **v-locator***work* is designed for operators of medium-sized fleets with between 10 and 250 vehicles and for whom cost-effective vehicle use and the monitoring of vehicle deployment are just as important as efficient communication between drivers and planners.

With our **v-locator***work* tradespeople, social services, delivery services, service companies, taxi operators and transport companies etc. have the possibility to organize and monitor their vehicles, to communicate in text form with drivers at practically no cost and to optimize drivers' routes with the award-winning navigation system TOMTOM Go.

In addition the owner can on demand be automatically informed immediately in the event of predefined changes in position (e.g., when a delivery vehicle reaches a customer). A wide range of analyses such as daily and monthly reports provide valuable assistance with invoicing and final costing of vehicle deployments. The **v-locator***work* calculates the respective current positions of vehicles in real time with the assistance of a highly sensitive GPS satellite receiver. No computer software has to be installed because all data can be retrieved from any computer with an internet connection.

Specifications

- **Hardware**
 - TOMTOM Go navigation system and communication center
 - GSM/GPS remote monitoring module locate-05 with GPRS support (optionally locate-29 or locate-33)
 - Combined GSM and GPS antenna
 - Installation accessories
 - All required connection cables

- **Features**
 - Use of fleet-controlweb, the internet-based vehicle tracking software
 - Exchange of text messages, vehicle assignments and status reports between drivers and planners
 - Navigation with the award-winning TOMTOM Go
 - Log book functions including option of individually defining names of geo positions, e.g., "Office" instead of "3, Station Road"; the log book meets the requirements of the tax office for an electronic log book.
 - Polling of current position of vehicle via internet (address specified) including display of position on a map
 - Polling of battery voltage
 - Polling of status of digital inputs
 - Setting of digital outputs via internet (e.g., immobilizer system)

- **Benefits of using the v-locator_{work}**
 - Immediate overview of current location of all vehicles (address)
 - The concrete position of a vehicle can be displayed on a map immediately (with zoom function down to street level)
 - Optimal routes with TOMTOM Go navigation
 - Sending of driving jobs, messages and status reports of driver
 - Addresses in driving jobs and messages which are sent by planners to vehicles can be entered as navigation destination at the press of a button
 - Wide range of analysis possibilities for routes driven and operational status of vehicles with ready-made lists and list generator
 - The reported holding times allow for example the exact calculation of the time spent by service engineers at individual clients
 - All movement and status data are stored in our data processing center for six months
 - All data and analyses can be stored and printed on your own computer
 - GPRS support means drastic reduction in mobile radio costs: according to the application these amount to between 6 and 10 euros per month
 - Minimal maintenance costs because uploading of application updates "over the air" is possible. Therefore devices do not need to be removed to be updated.

The on-board computer

The locate-05 remote monitoring module combines the receiver for GPS satellite signals, the mobile radio unit for transferring data from vehicles to the internet or a mobile phone and to the digital inputs for monitoring a large number of vehicle functions (e.g., ignition, emergency calls etc.).

The device also transfers messages, driving jobs and status reports between vehicles and planners and supplies the TOMTOM Go navigation system with data and power.
