PDA-data **Version 1.8**

Data-Exchange with PDAs thru OnBoard Units

The M2M-commserver takes care of the data exchange between various Telematic-, Telemetry- or Alarm-Center-Software and the remote surveillance modules.

With PDA-data you have the possibility to transfer data via the M2M-commserver to a PDA or other Terminals with a serial interface which is connected to an OnBoard unit.

This enables you to transfer orders or other business relevant data from a backend server to a driver or delivery quantities, signatures etc. from the driver to the backend application.

The advantages:

- low cost and user friendly PDA's can be used
- No extra SIM-Card is needed to connect the PDA to the mobile phone network
- No expensive SMS rates: only GPRS fees apply, which are about 1.000x lower than SMS rates for the same volume of data.

PDA-data Version 1.8

PDA-data comes with the following components:

- Template editor used to design the form which is displayed in the screen of the PDA.
- Predefined templates as basis for a quick development of your own forms
- Access to the M2M-commserver for transferring templates and data to the PDA.
- OnBoard unit add-on software needed to transfer data between the M2M-commserver and the PDA.
- Template-Interpreter (Java-Application) for PDAs to display templates and to display and edit data on the PDA including the transmission of data between the PDA and the M2M-commserver.

PDA-data and the M2M-commserver support the new communication standard GPRS as well as the communication via Data Call or SMS.

The M2M-commserver stores all the transmitted data for a period of 3 months.
